(NightStar works on virtually all tip-ups)

Mounting Instructions

**Made by the
Professionals at
Wisconsin
Precision
Manufacturing**

1. Remove the o-rings from the body casing; roll up tip-up flag; slip o-rings over the flag shaft.
2. Slide the NightStar into the o-rings and arrange it as shown above, so that the flat side of the unit is against the flag shaft; when flag is down, the NightStar should rest below the flag shaft. 3. Remove the plastic switch protector from the open end of the unit. TIP... Test the set-up to insure that it works properly. You may need to experiment with the unit's position along the flag shaft depending on the strength of the flag spring. **Storage:** The o-rings may be left on the tip-up, and the NightStar removed for storage. Replace the plastic switch protector when not in use, or store the light in a horizontal position.
